

Engineering, Inc.

The first name in mixers and dispersers

The first name in mixers and dispersers recommends...

Grated hatches, lids and loading hoppers for mixers and dispersers.

All in the interest of safety.

Grated loading hatches are standard features (unless customer specifically does not want them) on:

Tank mounted dispersers and mixers. The grates can be removed to allow entry into the tank or if large chunks of product need to be added

Hoist mounted vacuum disperser

Engineering, Inc.

The first name in mixers and dispersers

**Grated lids are available
(and strongly recommended)
for hoist mounted dispersers
and mixers.**

Attach the grated lid to the header so that when the blades are lowered, the lid is in place. Lids can be telescoping to fit different height tanks. Grated part of the lid is hinged.

**Protect your employees! Install
guards and safety lids on new and
existing machines.**

Grated loading hoppers are available for change cans. They permit rapid loading with less loss of ingredients.

The same type of grated lids are available for use on various diameter change cans. The grated part of the lid is hinged. Two other hinged solid openings are provided -- to be used to let impellers through the lid (as shown in picture left).

When you order a new mixer or disperser, we shall be happy to quote the cost of a grated lid or hopper. When inquiring about costs of this equipment for your existing machines, send us tank and mixer dimensions.
