## HELICAL AUGER

**50-70% better vertical batch movement**

**Faster deaerating of batch**

**Easy to clean**

**Rapid addition of powders and fillers without the need for problematic subsurface feeding systems**

## HELICAL AUGER

This unique intermediate speed blade has proven to be one of the biggest advances since the introduction of the tri-shaft mixer. With its open center and rapidly moving surfaces, this blade will NOT pack full of product ultimately resulting in material going around the blade. As material passes into the blade it freely works its way deep under the flight, where it is pressed in a vertical direction. Whether you are looking for a faster and more efficient method of adding powders or just a shorter time for the deaeration of your batch, this blade will enhance your process.
